Experience

Alation

Software Engineer III - Search
July 2019 - December 2022 (3 years 6 months)
Redwood City, CA

- * Backend-focused application development primarily for Alation's new search page with Python, Django, Elasticsearch, PostgreSQL, React, and Redux
- * Reduced the memory footprint and increased throughput of processes that often index potentially hundreds of millions of documents in Elasticsearch.
- * Introduced parallel indexing, accelerating indexing even further for customers with more compute resources
- * Implemented tracking of search performance and relevancy metrics for the team to document, analyze, and improve upon across releases.
- * Changed all necessary parts in the code base involving querying and installation of Elasticsearch to upgrade the Elasticsearch version used from version 1.x directly to 7.x.
- * Aided support teams in as an engineering point of contact for Search to unblock larger customers that encountered performance issues and miscellaneous errors.

Birst

Software Engineer
October 2016 - August 2019 (2 years 11 months)
San Francisco

- * Back-end feature development on the transform and load components of the product as part of the ETL process using Java, MongoDB, and SQL Server
- * Built APIs for the Prepare module in Birst, which enabled more users to transform extracted data without necessarily knowing a scripting language

Gap Inc.

Software Developer
May 2015 - June 2016 (1 year 2 months)

- * Built and maintained RESTful web services in Java using the Spring MVC framework and MongoDB
- * Integrated with other web services by consuming and producing messages
